SUMMARY

Flutter Developer and CSE student with 4.5 months of remote internship experience at ShafaCode, building client-focused mobile apps, production-style Flutter modules, API-integrated screens and Firebase flows. Strong foundation in Flutter, GetX, REST APIs, Express.js, MongoDB and competitive programming, with recent work involving AI voice infrastructure, WebRTC/LiveKit deployment, cost-aware API research and full client project ownership. Comfortable translating requirements into UI/UX, app architecture, business logic, debugging plans, documentation and backend collaboration.

TECHNICAL SKILLS

Languages: Dart, TypeScript, JavaScript, Python, C/C++, SQL	Mobile: Flutter, GetX, Riverpod, Dio, ScreenUtil, SharedPreferences, Platform Channels, Material Design
Backend/API: Node.js, Express.js, FastAPI, REST APIs, JWT/OTP Auth, Zod, API Documentation	Databases/Cloud: MongoDB, Mongoose, Firebase Auth, Cloud Firestore, Realtime DB, FCM, Cloudinary
Realtime/AI/Native: Socket.IO, WebRTC, LiveKit, Pipecat, STT/TTS, Android Native Services, Local Notifications	DevOps/Tools: Git, GitHub, GitHub Actions, Railway, VPS, Nginx, CI/CD, cPanel, SSL

EXPERIENCE

Flutter Developer Intern - ShafaCode	Remote Jan 2026 - May 2026
- Worked across multiple client/internal Flutter products using GetX, Dio, Firebase, local storage, Figma-driven UI and production-style feature architecture. - Owned selected projects/features end-to-end from client requirement analysis, UI/UX planning and implementation to debugging, documentation and delivery support. - Collaborated with backend teams on API contracts, realtime systems, third-party services, deployment constraints and cost/feasibility tradeoffs. - Prepared technical research and documentation for AI voice architecture, sports data provider selection, composite API features and client-specific product requirements. - Contributed beyond routine UI work by handling research, architecture tradeoffs, client communication, native feature investigation and selected Next.js tasks when needed.	

SELECTED INTERNSHIP CONTRIBUTIONS

AI Language Tutor / Voice AI Platform	Flutter, FastAPI, Pipecat, LiveKit
- Migrated a GPT Realtime-based voice AI prototype to Pipecat + LiveKit, reducing estimated realtime voice cost from about \$40 to \$14 per 1,000 minutes by limiting paid usage mainly to STT/TTS services. - Built/prototyped session orchestration with backend-generated LiveKit credentials, bot worker lifecycle, transcript events and Railway deployment; resolved WebRTC/STUN/TURN and async process stability issues.	
MarineLedger - Shipping Ledger & Accounts App	Flutter, GetX, Local-first
- Took full ownership of a shipping ledger and accounts calculator app: discussed requirements directly with the client, proposed UI/UX and feature improvements, and built the Flutter app around shipping/accounting workflows. - Implemented local-first ledger/accounting logic, calculation flows and private-environment safeguards because the project budget did not include a dedicated backend.	
Live Sports Score Platform	Flutter, GetX, API-Football, REST APIs
- Researched affordable alternatives to Opta/StatsPerform and selected API-Football based on feature coverage and budget fit for live scores, fixtures, standings, teams, players and match details. - Documented endpoint mapping and composite feature requirements requiring multiple API responses, then coordinated with the backend team and implemented the Flutter UI.	
LandGuru / Focus	Flutter, Dio, Firebase, Platform Channels
- LandGuru: implemented Figma-based Flutter UI and about 80% of API integration for a real estate/property platform using GetX, Dio, token-based flows, Firebase and file/image handling. - Focus: worked on native feature-heavy Flutter modules using platform channels/Android services, permissions, Firebase, background behavior and local notification workflows.	

SELECTED PROJECTS

pciST Platform - Club Management Suite	Flutter, Node.js, Express, MongoDB
- Built a full-stack club management platform with event/member management, Cloudinary gallery, admin chat, FCM push notifications and contest tracking for 30+ CP platforms. - Backend included JWT/OTP auth, RBAC, Zod validation, Socket.IO, Puppeteer PDF generation, Nodemailer email workflows and Agenda task scheduling.	
E-commerce Production System - Dhaka Plastic & Metals	TypeScript, React, Node.js, VPS
- Contributed to production customer site, admin panel and API; delivered 30+ features including analytics dashboards, performance charts, installment payment flow, SEO and mobile optimization. - Set up/handled GitHub Actions + SSH CI/CD, Nginx/VPS deployment, cPanel, SSL, Webmail, Open Graph metadata and canonical URL setup.	
Additional: ChatterBox real-time messaging app and MediCare hospital app using Flutter, Firebase Auth/Firestore, Riverpod/GetX, scheduling and role-based access control.	

ENGINEERING PRACTICES

- Maintains reusable repository-level architecture instructions to preserve Flutter feature structure, service/controller boundaries, API error handling patterns and project consistency across repositories.
- Applies competitive-programming strength to debugging and system design: breaks complex features into smaller flows, documents assumptions, and coordinates with backend/deployment teams before implementation.

EDUCATION, COMPETITIVE PROGRAMMING & LEADERSHIP

B.Sc. in Computer Science and Engineering Institute of Science and Technology 2021 - Present	Regionalist: ICPC Asia Dhaka 2024 & 2025 Finalist: NCPC 2023 Champion: IST Battle of Brains 2025 150+ contests, 1000+ problems solved, Codeforces max rating 1202 (sadimahmud225). Executive Committee Member, Programming Club of IST 2022-2023; organized contests, workshops and mentored juniors.
